

# **FEP Fluoropolymer Extruded Films**

## FLUORINATED ETHYLENE PROPYLENE FILM FOR USE IN HIGH-PERFORMANCE APPLICATIONS

FEP films are produced from Fluorinated Ethylene Propylene (FEP) resin by a melt extrusion casting process. FEP films offer all the benefits of fluorinated films, such as high temperature and chemical resistance, non-stick properties, and superior dielectric performance. FEP films can be heat-sealed, thermoformed, laminated to various substrates, and serve as a melt adhesive.

#### FEP Films Are Available In Four Grades

#### FEP PG (Premium Grade)

- Manufactured out of 100% virgin premium grade FEP resin with MFI range of 5-10
- Best suited for applications where high dielectric performance is required, such as PCB laminates and wire & cable applications
- Grade of choice for protective, decorative, see-through and other applications where visual appearance and clarity are important
- Meets ASTM D3368 specification for Type I FEP film

#### FEP WG (Welding Grade)

- Offers 15-20% cost savings vs. PG grade
- Perfect economical solution for heat sealing, welding, and other melt adhesive applications that don't have high aesthetics requirements
- Meets ASTM D3368 standards for Type I general purpose FEP film

#### FEP MR (Mold Release Grade)

- Due to its superior non-stick performance and up to 400°F (205°C) service temperature, FEP is the material of choice in high temperature composite molding
- Features high elongation and excellent conformability to complex contoured molds
- Standard colors include red, violet and white. Custom colors available upon request
- Available in a variety of perforated patterns
- Meets ASTM D3368 standards for Type IV mold release FEP film

#### FEP HG (High Molecular Weight Grade)

- Offers superior stress-crack resistance and flex endurance performance (250,000 cycles MIT test)
- Material of choice for chemical tank linings, pump diaphragms and rupture discs
- Meets ASTM D3368 standards for Type III FEP film

### **FEP Films Characteristics**

- Thickness range from 0.0005" to 0.010" (12 to 250 mµ)
- Standard width: up to 60" (1,524 mm)
- Thicknesses >0.002": up to 62" (1,575 mm) wide
- FEP HG is available in thicknesses 0.005", 0.010", 0.020" and 0.030"
- 0.020" and 0.030" are available up to 49" (1250 mm) wide
- Any slit widths available upon request
- Continuous service temperature range from -400° to 400°F (-240 to 205°C )
- Intermittent service temperature up to 500°F (260°C)
- Superior anti-stick and low friction properties
- Chemically inert and solvent resistant to most chemicals
- Outstanding dielectric properties over a wide range of frequencies and temperatures.
- Excellent light transmission and clarity
- Free of plasticizers, processing aids, or additives
- Acceptable for food contact
- Meets the requirements of US Pharmacopeia protocol for USP class VI plastic
- Bondable (plasma treated or chemically etched)
   surfaces available

FEP Fluoropolymer Extrued Film Fluorinated Ethylene Propylene Film for use in High-Performance Applications
