Chemical Resistance Manual

The information issued within this manual
are to be intended as guideline
for polymer type choosing. The following guidelines
based according to our knowledge
as per August 2016.

The following guidelines are without
legal commitment of any kind and are
not substituting the warranty certificate indication.

Key to Chemical Resistance Guide Ratings

E=	Excellent-Little to no effect due to exposure to the chemical
G=	Good-Satisfactory service expected, but some deterioration may occur after lengthy exposure or under extreme conditions.
L=	Limited-Variable resistance depending upon the conditions of the use (e.g. nature of the chemical, its concentration, service temperature, pressure, etc.).
U=	Unsuitable-Not resistance. Not recommended for use under any conditions.
C=	Cautionary-Although the chemical resistance of the material may be good, special factors exist that must be considered in application. Such as regulatory issues, permeation of vapors, and safety, health or environmental
